Skills

React, Java, Kotlin, Spring Boot, REST API Design, Microservices Architecture, Docker, Basic CI/CD, PostgreSQL, MySQL, Git & Github, Tailwind CSS, HTML.

Experience

QuCoon Limited - Full Stack Engineer & Application Architect
June 2024 – November 2024, VICTORIA ISLAND

Developed scalable full-stack applications using Spring Boot, React, and Kotlin. Designed efficient backend architectures, improved API performance, and contributed to cloud deployment workflows. Enhanced team productivity with optimized development pipelines and consistent debugging excellence.

Megaexe Digital - Frontend Engineer
NOVEMBER 2025 - DECEMBER 2026, REMOTE

Rondwell Application (MegaExe Limited) — Frontend Product Development

Led the end-to-end development of the Rondwell application under MegaExe Limited, delivering a production-ready product from requirements to deployment. Designed secure with a layered architecture, and built a high-performance, responsive frontend using Svelte. Developed and documented RESTful APIs for core workflows and integrations, implementing authentication, data consistency checks, and robust error handling while following requirement-driven development with clear specifications and acceptance criteria.

Education

Lagos State University, Ojo
July 2022 – October 2025

B.Sc Physics

Wenby's College, Idimu, Lagos
September 2014 – December 2020

Secondary School Education

Projects

Weather Forecast Web App — React + Spring Boot

Built a modern weather dashboard with real-time API data, component-driven UI design, and clean REST backend architecture.

To-Do List API — Kotlin + Spring Boot + JWT

Implemented a secure CRUD-based API with JWT authentication, database persistence, and maintainable clean architecture.

Simulation Project — Computational Modeling

Developed a simulation to model system behavior using computational methods, translating theoretical models into efficient algorithms.
